

## **What you might need:**

### **Flashlight**

**Drinking water**..... there are several 5 gallon containers to get water in Eagle Nest or take bottle water

**Bedding/Towels** ..some there, but you may need full size sheets and bath towels

**VCR movies**....the tv's not great and only get a fuzzy Ch 20.....should take some movies or can rent in Eagle Nest or Angel Fire

**Bat in the cabin**.....from time to time a bat has managed to find it's way into to the cabin. No they Do not suck blood or wear capes and turn into vampires. Should you encounter one there is a Net by the backdoor to catch the little critter in.....just let him/her go outside !!!

**Food** . we find it best to take food that's easy to prepare, sandwich, casseroles snack food, pbtr & jelly We **don't have** 220v ran for electric stove in the kitchen yet.....

We do **have a large George Foreman** to cook hamburger patties or chicken breasts and it makes a great grill cheese or ham/cheese .....

There is a **charcoal grill** but because of the fire danger please do **NOT use outdoor cooker**.....

There is a **microwave** ..... Good to take casseroles, cobblers, etc that can just be warmed up

## **Arrival**

**NOTE:** because we only have one breaker box currently for the cabin.....you may trip a breaker, if you do.....you may need to turn off some other electric items .....

### **ELECTRICITY**

- 1) Turn on the Main Electric Breaker at the pole outside the back of the cabin
- 2) Inside the backdoor to the right.....there is a breaker box  
Turn on all breakers (this should turn on lights in each room and refrigerator)

### **WATER HOOK UP---don't use this water for drinking !**

- 1) The pump is under the stairwell in the bathroom and 2 bolts with wing nuts
- 2) Set the pump on the trailer mounting plate, then slide the white hose on the tank fitting, tighten the hose clamp on the tank fitting
- 3) Put the wing nuts on to hold the pump in place.....just have to be finger tight
- 4) Connect the water hose from the cabin to the pump valve, open the valve all the way
- 5) Open the valve (black one) on the water tank
- 6) Run the extension cord from the bathroom and plug in to the pump

The pump will run a minute until the pressure is reached and will then shut off

- 7) **DO THIS LAST**.....in the cabin upstairs between the white cabinet and couch.... there is a black cord with yellow end.....plug it into the outlet .....this is for the bath hot water tank ..... **WATER MUST BE IN THE TANK OR IT WILL RUIN IT !**  
If you are not sure, just turn on the hot water valve in the tub or bath vanity.

## **Chemical Toilets**

Use the outhouse at your own risk !!!!

You probably shouldn't have to do anything to these but use them !!!

The chemical toilets (one in the bath and in one bedroom) are ready to use.

And although it's not "manly" ..... **if the "boys" would sit to whiz** ....it works best.

### **To use:**

Pull out the handle in the center front of the toilet

This opens up the holding tank

Do your business ..... if you need water, use the pump at the back of the toilet to pump in

Push the handle in to close off the holding tank

### **To empty:**

**Should the tank become full** (can see the "red" indicator showing how full it is)

Turn the tank around

On the back, move the lever so that the top portion can be removed from the bottom

By the handle, carry the tank to the outhouse

Turn the large tube with the cap on it "out" away from the tank

Unscrew the cap, turn the spout down and press the "Release button" until empty

Replace the cap

Use the compost sack in the outhouse and pour a layer of compost over the top

Set the tank flat, place the top portion back on, making sure it locks

Under the bath vanity, get a packet of holding tank deodorizer

Open holding tank cover and pour in the contents

Use the water pump several time to add water to mix

It's now ready to use again

## **LEAVING.....**

**Trash**..... PLEASE take all trash out

use the dumpster at City Hall in Eagle Nest... turn North at the Gold Pan Restaurant 1 block

**Refrigerator** .....prop open the doors a little (can use a plastic cup)

**Linens/Towels**.....if you use some that are there, if you are coming back to Amarillo.....we can get them from you and have them ready the next time someone goes up

**UNPLUG THE WATER HEATER CORD**

Unplug the black cord with yellow plug between the couch and white cabinet upstairs

**Water Tank**

**Unplug the electric cord at the tank**

**Open a water faucet** in the cabin and let the pressure off the system

**Turn off the valves** ....black tank valve and brass valve on the pump

Disconnect the **water hose** from the tank

**Electricity**

LEAVE a **light on** in each room and the refrigerator plugged in

**Turn off** all breakers inside the cabin

**Turn off Main Breaker** at the pole, outside the cabin
